

DAMASTEEL®

CUTTING EDGE. AND LOOKS TOO.

Austenitic Damascus Steel

Damasteel Austenitic round bar is made from the extremely corrosion resistant alloys 304L and 316L. Unlike the Martensitic blade steels, this material cannot be hardened, however it is ideal for the manufacture of rings and other jewellery. All of the above rings were made on a lathe, either from parting off the end of round bar, or machining the rings out long wise to get different effects and patterns.

Austenitic stainless is etched in acid after machining and polishing to reveal the patterns.

Please see the Spec sheets on Damasteel's web site for more details.

Minimum cut is 100mm, smaller cuts can be made but a \$30 surcharge applies. Prices include GST

Pricing Current as of 23/09/2015 Version 1.0

<u>Part Number</u>	<u>Diameter</u>	<u>Pattern</u>	<u>Price Per Meter</u>	<u>Price Per cm</u>
