ISA iGas Telemetry System wins award

Inside This Issue

- 1 Award to Cootes Transport
- 2 ISA iGas Telemetry System
- 2 Gameco Web Site
- 2 Pettinaroli Ball Valves
- 3 Employee Profile
- 3 News from HR
- 4 Birthdays and Anniversaries
- 4 Upcoming Events

Installing and using the best known Telemetry System for the Gas Industry, the ISA iGas System was paramount in the **Cootes Transport Group** taking out the Supplier/Distributor/Customer Service Award sponsored by NSW Fair Trading. The award was presented by to Mark Anderson – National LPG & Bitumen Manager of Cootes Transport by Michael Cooper of NSW Fair Trading. The award recognized excellence within the Gas Supply & Distribution Industry.

Cootes recently implemented the installation & use of the ISA iGas Telemetry System to remotely read LP Gas Tanks at a chain of Service Stations Australia wide. In using this system, Cootes were able to demonstrate the significant benefit of providing telemetry to its customers.

The ISA iGas System reads the contents of tanks & provides the information to determine how much gas the customers need & when is the optimum time for the delivery of replenishment. With this information, Cootes Transport is able to accurately target sites that need the product most & ensuring that customers never run out of product.

This has provided significant cost effective, safety & environmental results for customers, improving both Cootes customer service & importantly, customer satisfaction.

Cootes were able to demonstrate the significant benefit of providing telemetry to its customers

Gameco – distributor of ISA telemetry

Gameco are the distributor for the ISA Telemetry Systems for Australia, New Zealand & the Pacific region.

The ISA iGas Telemetry System has both ATEX & IECEx Certification

The ISA iGas Telemetry System has both ATEX & IECEx Certification for use in hazardous zones & is the favoured system used by many European Gas Merchants such as Shell, BP, GALP, Butagaz, Primagaz, SHV Gas.

With the iGas system, it is possible to remotely monitor tank levels, pressures, and cathodic protection of underground tanks, exchange cylinder stocks, in LP Gas, Fuels & Lubricants. This is facilitated via the Digital GSM Network & the World Wide Web.

The ISA iGas Telemetry System is a tried & proven system used worldwide. The system is designed & manufactured by a progressive & innovative company based in Portugal.

For more information or a demonstration of the iGas System, phone or email GAMECO on (+612) 9648 5856 – salesnsw@gameco.com.au

Gameco Web Site

At long last the Gameco web site is back in business after being rebuilt starting from scratch.

The old web site was destroyed by hackers & all of the information contained in it was lost forever.

Like most web pages, the Gameco web page is a 'work in progress' & will be for quite some time to come. Many of the company's products are shown on the site & there are a number of catalogues available for download.

This has been a long & costly effort but the result is something that we are most proud of. So much so, the management team at Gameco's Sydney office noted the rapidly changing way as to how new customers find them. In acknowledging those changes, Gameco will not appear in the Sydney Metropolitan Yellow Pages Directory in the coming year. This could prove to be a bold step but on the other hand, we should regularly pop up on the web.

Note: Yellow Pages is a trade mark of Telstra Corporation Ltd

(ABN 33 051 775 556)

Pettinaroli Ball Valves

Gameco are the Australian & New Zealand distributors for the high quality range of Italian made Pettinaroli Ball Valves.

These valves all carry the Australian Gas Association (AGA) Approval.

View these valves on the Gameco website www.gameco.com.au & call us for our most competitive pricing.
